

Diego Dreier

MEDIA INFORMATICS · SOFTWARE DEVELOPMENT

Final-semester B.Sc. Media Informatics student at BHT Berlin, interested in connecting AI with solid software engineering. In my bachelor's thesis I automate workflows as deterministically as possible and apply large language models specifically where rule-based logic reaches its limits, with the aim of integrating AI features into existing systems in a controllable and reproducible way. From coursework and my internship at donista.org I bring full-stack experience (React, React Native, Node.js, REST APIs, authentication) as well as frontend QA and documentation. I teach myself unfamiliar technologies quickly and independently, preferably straight on a real problem.

EDUCATION

B.Sc. Media Informatics 04/2022 – present
Berliner Hochschule für Technik (BHT) · 9th semester

- **Bachelor's thesis:** LLM-supported workflow automation
- Deterministic automation with targeted LLM use at the limits of rule-based logic, for controllable, traceable processes

EXPERIENCE

Software Development Intern 11/2025 – 02/2026
donista.org · Berlin

- Built a React Native app for iOS and Android based on an existing React web application
- Live on the Apple App Store and Google Play Store
- Frontend QA and documentation
- Product-oriented software development in a startup environment

SELECTED PROJECTS

CareLog – MERN application with authentication

React · TypeScript · Node.js · Express · MongoDB · JWT

- Built a full-stack application with a REST API and role-based access
- JWT authentication, bcrypt hashing and protected frontend routes
- Backend validation and error handling for traceable user flows

Reddit Political Mentions Analysis

Python · PRAW (Reddit API) · pandas · Matplotlib

- Collected, cleaned and aggregated data via the Reddit API
- Exploratory analysis and visualization of political mentions with pandas and Matplotlib

Classic ML algorithms (coursework project)

Python · scikit-learn · NumPy · pandas

- Implemented and applied ML methods: k-NN, linear & logistic regression, decision trees, naive Bayes
- Evaluation and visualization of results on datasets in Jupyter notebooks

Team project: 2D game “Hellfall”

Unity · C# · GitLab · ClickUp

- Developed over one semester in a six-person team. Learned Unity and C# from scratch for it
- Contributions to movement/physics, data persistence, UI and enemy logic; playable prototype with final presentation
